

LOCKABLE LINE VALVE

Description

Lockable Line Valves consist of a brass ball valve fitted with flat face unions and copper pipe stubs. The copper pipe stubs enable installation utilising fluxless brazing to WKO(82)1. The unions incorporate o-ring seals ensuring gas tight connections. The valve handle is lockable in the open or closed position to prevent unauthorised or inadvertent operation of the valve.

Lockable Line Valves are available for all standard pipework sizes from $\phi 15\text{mm}$ to $\phi 108\text{mm}$. Other sizes are available on request. Non-lockable versions are also available.

Designed to meet the requirements of;

- **HTM 2022** **Medical Gas Pipeline Systems.**
- **C11** **NHS Model Engineering Specification – Medical Gases.**
- **BS EN 737-3** **Pipelines for compressed medical gases and vacuum.**
